TOP SOLUTIONS TO SUPPORT DIGITAL CONSTRUCTION

O3's cloud-based software is the only platform on the market completely dedicated to supporting Advanced Work Packaging and ultimately digitalizing your construction projects. It does so by offering a full suite of solutions to meet you where you are on your journey.

The platform includes the core functionality needed to support collaboration, communication, and a sleek design that is easy to use. The following solutions from O3 are some of the best on the market to help support construction to go digital:

ONDesign

ONDesign is true AWP for Engineering and Procurement. Providing value directly to the Engineering and Procurement teams is critical to driving AWP adoption. Forcing Engineering and Procurement to adjust their work process or execution sequence to benefit construction downstream will make the overall project more productive. AWP mature organizations understand, however, that the best path to efficiency is one where every organization actively embraces the process for their own benefit and for the benefit of the overall project.

ONDesign Features:
• Engineering Management
• Procurement Management
• Status Visualization
• Constraint Management
• Vendor Data Management and Collaboration
• Reporting and Analytics
• Scheduling

ONBuild

ONBuild is one of the first software solutions to provide construction with one place to scope, manage and progress all Installation Work Packages across all disciplines, functions, and package phases. It's the first comprehensive Workface Planning solution that combine sophisticated graphical work packaging with true constraint management. It also includes robust reporting and analytics to identify and resolve problems before they impact productivity.

ONBuild Features:

• Workface Planning
• Construction Management
• Status Visualization
• Constraint Management
• Reporting and Analytics
• Scaffolding Management

TOP SOLUTIONS TO SUPPORT DIGITAL CONSTRUCTION

Mobile Solutions

Mobile solutions are necessary to advance your digital transformation because they allow you to access data in real-time from the job site. O3's mobile solutions are supported by our cloud software platform to enable you to access information from anywhere. No more printed pdfs or binders in the field. You can track tool time, take safety observations, and mobilize Workface Planning with our mobile solutions and apps.

Mobile Features:

• ONField
o IWP Access – access planned IWPs directly from the field with the most up-to-date info
o Progress Updates – collect and communicate execution task progress as work occurs
o Attachment Annotations – mark up IWPs and drawings with important considerations as-builts and other information for quick and easy communication across stakeholders

• ONSafe
o Safety Observations – digitally diagnose safety trends on a project
o Safety Reporting – identify and mitigate safety risks and trends

• ONTools
o Tool Time Observation – find productivity barriers on a job site
o Tool Time Reporting – identify and remove barriers to productivity
